

Case Study

Industry: Retail

Client

The customer is a retail giant based out of UK, whose primary domain of service is listing all affiliate businesses and products.

Executive Summary

The client needed a single inventory management application to manage the movement of finished products for more than 26 depots around the country.

Technology

- + ASP.NET,
- + VB.NET,
- + MS SQL Server 2000
- + DTS Package

Solution

- + Developed a framework which would ensure that there is a centralized server which would have the status of all the branches.
- + To ensure seamless transfer of data a failover mechanism was built.
- + Open ended system architecture for accommodating constant changes.
- + Home grown agile development methodology implemented.

Challenges

- + Modernization from a legacy system.
- + Eliminating single point of failure with limited infrastructure at certain depots.
- + Constant requirement changes.
- + Time crunch.

Business Impacts

- + One stop for picking products and managing them across depots.
- + Entire supply chain is made robust and manageable.
