STS

CASE STUDY

INDUSTRY:
IT & ITES

CLIENT

The customer is a Canadian Information Technology company providing small to medium sized businesses with Information Technology services and solutions. They provide affordable and manageable IT capabilities to organizations that would otherwise be beyond reach to SMEs.

EXECUTIVE SUMMARY

The customer being an IT solutions frontrunner wanted a solution that would enable them to track shipments and route it as desired. They wanted application that would leverage their level, in logistics and supply chain industry.

Synergy Technology Services, being a critical business solutions provider was given the opportunity to develop an application that would help the customer realize their goals.

TECHNOLOGY

- jQuery
- Javascript
- Spring MVC
- Spring JDBC
- Jasper Reports
- tMS SQL Server

SOLUTION

To track and route large consignments without any hassles, an application is required to address the bottlenecks that arise. The application should be capable of maintaining a shipment order, dispatch details and warehouse whereabouts.
- Developed a web application that would allow the administrator to create panel for shipment order.
- Developed a shipment tool to track and route the shipment in the best possible course, so as to eliminate time and resource wastage.
- Developed dispatch board to help the customer prioritize the delivery routes and optimize the supply plan.
- Developed a load board to enable the customer keep track of their cross-docks (warehouses), and materials reaching each of these cross-docks.
- Report generation based on the billing, delivery and invoices.
